

Improvement Science

Accomplishing Growth Together

Learn how to "reduce the gap between what is actual and what is possible" through an Improvement Science approach to implementing lasting change.

This professional learning series will enable district teams to collaborate with other districts on systems and practices that address students' academic growth and social-emotional needs.

With your strategic planning team, you will analyze your local student outcome data, engage in a root cause analysis, generate change ideas, and develop a Plan-Do-Study-Act cycle of improvement informed by disciplined inquiry.

These workshops are aligned with LCAP implementation and differentiated assistance.

This is an in-person event held on the SJCOE campus.

To register your team:
