Assistive Technology to Support Individuals with Autism Spectrum Disorders

Workshop Information:
Students diagnosed with Autism Spectrum Disorder (ASD) process visual information easier than auditory information. Assistive Technology enables students with ASD to process information through their stronger learning modality. This training will discuss a variety of Assistive Technology tools that can support individuals with ASD and will present research that proves how individuals with ASD benefit from Assistive Technology.

Participant Outcomes:
- Identify student characteristics/needs that can be addressed through Assistive Technology.
- List Assistive Technology tools to support students with an ASD.
- Organize Assistive Technology into core areas to support every aspect of daily living in order to improve the functional capabilities of individuals with autism.

FEBRUARY 7, 2022 | 1:00 PM - 4:00 PM | ZOOM

Registration Fees
Inside SJC SELPA Rate ($10.00)
Outside SJC SELPA Rate ($15.00)
